Integrate seamlessly with any HIMS

# AI-Powered Real-Time Clinical Alerts

**AI-Enabled Clinical Decision Support**  
Trained on 1Bn+ health records, AI-powered clinical decision support delivers real-time, evidence-based insights for proactive care

**AI-Enabled Prescription Generator**  
Doctors input via text or voice in simple language. AI generates structured prescriptions and benchmarks them against global best practices.

**Detection of Drug-Drug Interactions**  
Agentic AI that detects drug-drug interactions in real time, enabling safer, more informed prescribing.

**AI-Enabled Prescription Analyser**  
An AI Agent that reviews medical transcripts and suggests modifications to ensure the prescription is complete and accurate.

# Unlock Revenue Potential

**Automated Reminders**  
System sends automated follow-up reminders to patients for next visit, missed appointments, vaccinations, pregnancy scans and any custom flow. This increases more visits to hospitals and keeps patients connected to your hospital

**Lab Conversions**  
Doctors recommends a test to a patient and system tags it to the hospital specific test name. A lead is passed on to hospital staff real time with all details. More visibility leads to more conversions.

**More Visibility on Patient Eligible for Admissions**  
Doctors mentions while writing to patient about admission and lead is passed on to hospital staff real time with all details. More visibility leads to more conversions

**Pharmacy Conversions**  
Prescription is directly linked to pharmacy, making it easy for patients to buy medicines. Patients follow treatment better when process is simple.
